

**Automatically sync room booking tools and data between Archibus and Exchange for a more seamless user experience.**

## Empower Your Employees & Data-Driven Decisions

- **Enable employees to book meeting rooms via Exchange**, with data automatically synced to Archibus
- **Give employees the flexibility** to keep using a platform they know versus getting trained on a new system
- **Easily access comprehensive room usage data** from Exchange and Archibus to empower space planning decisions

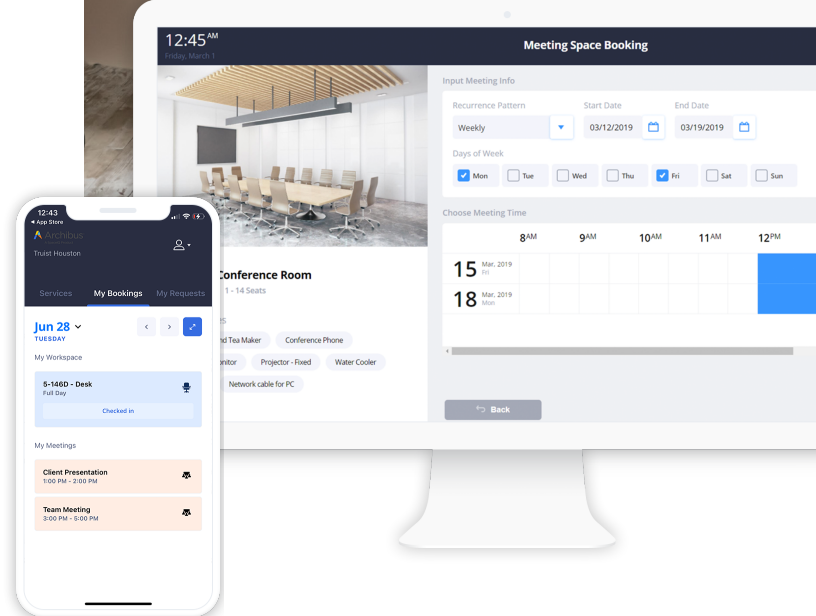

## One Sync Function to Support The Room Booking Lifecycle

1. An employee reserves a meeting space via Exchange, like they're used to, to enable in-person collaboration with their colleagues or clients.

2. The Archibus Extension for Microsoft Exchange inherently synchronizes room booking data between the two platforms for greater visibility and flexibility.

3. Space managers have convenient access to all the room usage data they need, from which rooms are being used to how often they're being used.

## Support for Employees & Managers Alike

The integration between Archibus and Exchange drives greater productivity throughout the workplace:

- **Employees can maintain a simple user experience** when booking meeting spaces, making in-person collaboration easier
- **Managers can quickly access powerful data** around room usage to support employee needs and reduce real estate costs

Connect the capabilities of Archibus with those of Microsoft Exchange to **streamline collaboration and fuel smarter space planning decisions.**
